John Maynard Keynes is generally considered the founder of modern macroeconomics. He was an English economist, philosopher, and statesman. His ideas, known as Keynesian economics, have had a profound impact on the world's economic thought and policy. He is best known for his theory of aggregate demand, which states that the total spending in an economy determines the level of output and employment. He argued that during a recession, the government should increase its spending to stimulate demand and create jobs. His work was particularly influential during the Great Depression of the 1930s, when many countries were struggling with high unemployment and economic stagnation. He also played a key role in the Bretton Woods Conference in 1944, which led to the establishment of the International Monetary Fund (IMF) and the World Bank. His book "The General Theory of Employment, Interest and Money" (1933) is one of the most important works in modern economics. He was awarded the Nobel Prize in Economics in 1929 for his contributions to the theory of interest and money. He was also a member of the British Academy and the Royal Society. He died in 1946, but his ideas continue to shape economic policy and thought today.
