production is diamond corundum varieties, ruby and sapphire beryl varieties emerald, aquamarine, and kunzite. Many other semiprecious gemstones are Uraninite. Wikipedia Uraninite, formerly pitchblende, is a radioactive, uranium rich mineral and ore with a chemical composition that is largely  $UO_2$ , but due to oxidation the mineral typically contains variable proportions of  $UO_3$ . Additionally, due to radioactive decay, the ore also contains oxides of lead and trace amounts of helium. It may also contain thorium, Pitchblende mineral Britannica Pitchblende Pitchblende,, amorphous, black, pitchy form of the crystalline uranium oxide mineral uraninite q.v it is one of the primary mineral ores of uranium, containing percent of that element. Three chemical elements were first discovered in pitchblende uranium by the German chemist Martin Pitchblende.
